RING JOINT GASKETS

Dan-Loc has more than 200,000 standard size ring joint gaskets in stock and available for immediate shipment. These include all popular sizes of “R”, “RX”, and “BX” style gaskets. Dan-Loc stocked gaskets include low carbon steel, F5, 304 and 316 materials.

PERFORMANCE THAT COUNTS.

STYLE R

Meeting ASME B16.20 specifications, Dan-Loc R style gaskets are available in both oval and octagonal configurations and are interchangeable on modern flange grooves.

STYLE RX

This is a pressure-energized adaptation of the standard R gasket. Interchangeable with the R style gasket, the RX gasket provides a more effective seal option for higher system pressures.

STYLE BX

These pressure-energized ring joint gaskets are designed for system pressures up to 20,000 psi. They allow virtual face-to-face contact of the flanges to ensure that the gasket is fully trapped on both the inner and outer diameters.

RUBBER COATED

This is a seal consisting of a ring joint gasket totally encapsulated in a profiled nitrile rubber coating.

WE PERFORM SO YOU CAN PERFORM.
