# TAP END STUDS

## PERFORMANCE THAT COUNTS.

Tap end studs have a different thread length at each end of the stud. The shorter thread length is called the tap end and is threaded into the tapped hole of a flange. The longer thread length is called the nut end.

- Diameter size range: 1/2" – 3 1/2" in diameter.
- Threads – Threads shall be Unified National Class 2A fit, 8 thread series or as specified by customer.
- When ordering, please specify: Diameter (D) and (D1) Length (L) – End-to-end dimension (If first thread to first thread is required, order must specify)
- Thread length (T) and (T1) thread series prints should be furnished on tap end studs whenever possible

Dan-Loc can produce tap end studs with custom radius and relief specifications as well as close tolerances and special thread forms and classes.

**WE PERFORM SO YOU CAN PERFORM.**
